RCR AWARDED POWER GENERATION CONTRACT

Integrated engineering company RCR Tomlinson Ltd (ASX: RCR) is pleased to announce that it has been awarded a contract to provide power generation works for BHP Billiton Iron Ore's Yarnima Combined Cycle Power Station in Newman, Western Australia.

The contract is valued at approximately \$30 million and includes the design, manufacture and supply of three Heat Recovery Steam Generators (HRSGs) and associated equipment.

Work will commence immediately and is scheduled for completion in the second quarter of 2013.

RCR's Managing Director, Paul Dalglish, said that the contract is the first major power generation contract awarded to RCR using AE&E Australia technology, which was acquired by RCR in May last year.

"It's good to get this project into our Energy division following the acquisition so we can continue to develop the team and reinvigorate client relationships", said Dr Dalglish.

"RCR continues to demonstrate the depth of its intellectual property in energy technologies that we can offer to customers in both the industrial and utility sectors. Our capabilities include design, supply and installation of Combined Cycle Power Plants that incorporate HRSGs".

About the Acquisition of AE&E Australia

RCR acquired the business of AE&E Australia in May 2011. The business' capabilities included design, supply, installation, commissioning and maintenance for generation of energy, including combined cycle power plants, steam and power generation plants, heat recovery steam generators and industrial boilers in Australia, New Zealand and South East Asia. RCR's technology base is suitable for gas and liquid fuels, biomass, renewable energy and coal.
